

GLOVE RINSE

Leatherwood Plastics' Glove Rinsers are made of natural polypropylene with a white polypropylene top flange. Designed to drop into most standard workdeck configurations, the rinser can drain directly to the sump or be plumbed to a drain header.

An optical sensor detects the presence of an object and activates the opposing rinse spray outlets. When the object is removed, rinsing action stops. Spray pressure is controllable by an adjustable inlet control valve for its DI water connection.
